

Separatech Canada and Alderley plc sign International Licensing Agreement for COP technology

Separatech Canada Inc. (www.separatech.com) is pleased to announce that it has signed a Licensing Agreement with Alderley plc (www.alderley.com) for the manufacture and sales of COP systems, Separatech's proprietary technology, for oil field produced water separation systems on permanent oil & gas installations.

With ever tightening oily water discharge requirements worldwide and the need for sustainable technologies for environmental cleanup, the COP technology is ideally placed to treat produced water efficiently and economically.

As a leading total solutions provider to the oil, gas and petrochemical industries with an existing range of metering systems, process equipment and control systems, Alderley is well positioned to promote the COP technology not just in its established markets, such as the North Sea, but also on a worldwide basis. Alderley's Director of Sales (ASL), Jon Stevenson, comments: "In looking for a technology that is efficient, sustainable and economic in today's environmentally challenging world, we believe that Alderley has found in COP an excellent addition to our range of solutions to problems of water treatment. This unique technology can remove oil droplets down to 0.5 microns and thereby reduce oil-in-water levels down to less than 2ppm".
